VEHICLE

TRANSPORTER L2H2

HELLO THERE!

The following document contains a detailed estimation of the pricing for the standard chassis conversion of a **L2H2 Transporter**.

Before we dive into the cost of the van's features, we will present to you the stages of the project and how we will approach our work.

I hope this document is clarifying, if you have any questions you know where to find us!

Neus and Fede

STAGES OF THE PROJECT

1. DESIGN & CONCEPT

🕒 4 Weeks

In this stage, the layout will be proposed, and the aesthetic and conceptual foundation for the van's interior will be established. This includes the design concept, initial sketches and a mood board/inspiration board.

By the end of this stage, the design should be finalized and approved, ready to proceed to production. Minor changes can still be requested, but please note that significant modifications after this point may result in increased costs for labour and/or materials.

2. PRODUCTION

🕒 3 Months

This is the stage where material management, purchasing, delivery, and production take place. It includes all phases of the van conversion, from the ground up:

Openings, insulation, wall coverings, electrical and electronic installation, water and gas systems, coatings, flooring, furniture, and accessories/decor.

We will do our best to record everything so you can see exactly what your house on wheels is made of! It's important to understand the processes involved in a project of this size— people often see the final result, but not the step-by-step that gets us there.

Time estimations consider basic projects with built-in features only (see next page). Special features could add complexity and time to the project.

We will keep you updated so you're informed every step of the way as we bring your dream van to life.

At this stage, it's also understood that some small changes may be needed due to production constraints or to optimize space. No major changes will be made without prior notice or an agreement between us.

PRICING: BUILT-IN FEATURES

Here are the main features that a van of this type will have—or at least what we usually include. It's our way of making sure it looks great and has everything you need to live comfortably.

OPENINGS

- **Two side windows**
- **Two roof window**
- **Two rear windows**

FLOORS, WALLS AND CEILING

- **Parquet flooring**
- **Profilholz paneling**
- **All surfaces protected with water-based lacquer and oils**
- **Tiles in the kitchen area**

KITCHEN

- **Fridge running on 12 volts and 230 volts, capacity between 45 to 60 L.** depending on availability and price
- **Stove with two burners**
- **Water tap**, preferably handmade from copper :)
- **Water sink**
- **High pressure water system**

INSULATION

- **Alubutyl foil** – for noise absorption
- **Armaflex 19 mm** – applied throughout the van, with 9 mm used in certain areas as needed
- **Floor insulation** – 9 mm Armaflex, topped with a 9 mm wooden board, then finished with parquet flooring

ELECTRICS

- **230 volts and 12 volts current**, with sockets and USB plugs
- **External domestic power connection** with a safety FI/LS switch and switch box
- **1 Lithium battery**
- **Electric power converter (up to 3000 W)**
- **Manual cut-off switch**
- **Victron charger/booster** for battery charging
- **Electronic panel screen** showing battery charge level and power usage
- **Solar panel (300w)** with charge controller (MPPT Victron) to charge the lithium battery
- **Lights in the bed area, kitchen, and living room**, plus main ceiling lights

PRICING: BUILT-IN FEATURES
